

—	VEGETATION LINE DEC 2008 AERIAL PHOTOGRAPHY			
—	LOW SCENARIO	JULY 1996 STORM EVENT	+0.4m SEA LEVEL RISE	100 YEAR TIME FRAME
—	MEDIUM SCENARIO	JULY 1996 STORM EVENT +10%	+0.9m SEA LEVEL RISE	100 YEAR TIME FRAME
—	HIGH SCENARIO	JULY 1996 STORM EVENT +10%	+1.1m SEA LEVEL RISE	100 YEAR TIME FRAME

- NOTES:
1. These plans provide an interpretation of development planning setbacks for coastal erosion under a set of possible climate change scenarios. These plans do not have the precision required to define erosion risk to individual properties.
  2. Planning setbacks indicate potential shoreline erosion due to climate change and severe storm impact. Additional allowances may be required for coastal inundation and runoff flooding.
  3. Setback scenarios defined in this plan have been derived using the methodology outlined in Damara WA (2011) Shire of Busseton Coastal Erosion Study - Assessment of Climate Change Impacts. Report 96-00-01.
  4. Future coastal erosion has been assumed to be distributed across the Busseton shoreline. However, this distribution will be affected by future coastal management practices and maintenance of coastal defences.
  5. Plans incorporate the known presence of coastal protection structures, but do not account for structural capacity or condition, and may not capture the extent or influence of buried structures.
  6. It has been assumed that existing coastal protection structures are maintained in their present position. This assumption produces a relative bias between groynes and seawalls, with much greater effort required to maintain a seawall.
  7. Aerial imagery from LANDGATE GEOGRAPHE\_BAY\_DEC\_2008\_MOSAIC captured on 19/12/2008.
  8. Seawall extent is uncertain, existing condition is variable
